

## The Trinity

East Hill, Wandsworth, London, SW18, 2007

The scheme combines commercial spaces and 108 residential units into a homogenous form, addressing a number of street frontages and defining the major road intersections. Blocks of 5 and 6 storeys linked by glazed circulation cores provide a strong urban edge and contain a protected landscaped courtyard and amenity areas. Contemporary finishes and detailing are applied to the facades and full height projecting windows take advantage of the sites elevation position promoting generous outlook further afield. Commercial areas at ground floor are extensively glazing to promote highly active frontages to this prime location.
